

# LAMA HEALTH MAINTAINENCE

## ANNUAL

VACCINATIONS – Rabies & CDT (clostridium c & d + tetanus)

SHEARING - Spring, usually April or May.

## *DE-WORMING*

-

*45/60 DAYS – Dectomax injection – most veterinarians suggest using double the label dosage, i.e. 2 cc's per 100 #'s. DO NOT EXCEED 60 DAYS BETWEEN SHOTS!*

SPRING AND FALL - Fenbendazole (Panacur or Safeguard).  
Suggested lama dosage is about double the label. Oral administration.

## *FOOT (TOENAIL) CARE*

Check feet when de-worming, trim toenail to flush with footpad.

## FEEDING REGIMINE

Lamas require about 2% of body weight of good quality first cut grass hay per day. They require a good quality lama specific granulated mineral mix

**available free choice. We also feed one pound per day good quality lama specific grain. This is an excel-lent management tool as well as a health issue. The grain supplies the normal supplementary mineral requirement.**
